COUNTY OF RIVERSIDE PLANNING DEPARTMENT STAFF REPORT ADDENDUM

EPD CONSTRAINED AREA UPDATE:

During the August 19th Planning Commission Hearing Commissioner Roth requested that a Condition of Approval be added to the project that would require fencing surrounding an area on the map that Environmental Programs Department (EPD) indicated as a constrained area. The following condition was created after the Planning Commission hearing-

60.PLANNING.19 FENCING REQUIRED

Prior to grading on the site, permanent fencing shall be required surrounding the environmentally constrained area as indicated on the tentative map.

The applicant and staff subsequently met with Mr. Jared Bond in EPD who indicated that while the area is constrained on the map, it is intended to be constrained from grading only and was not intended to have permanently restricted access. EPD had previously added fencing conditions but only temporary fencing for grading purposes only. Mr. Bond has composed a letter indicating the position of his department, the letter is attached to this addendum.

In preparation for a Board hearing the condition was removed.

Dear Commissioner Roth,

After speaking with applicant Bruce Lindsley and with County Planner Matt Straite it came to my attention that there were some concerns regarding the Riparian/Riverine feature located on proposed Parcel Map 33278, which was discussed at Planning Commission on 08/19/09. I believe that you were concerned with potential impacts to the feature and recommended that the Riparian/Riverine feature be fenced in addition to the existing avoidance measures. Based on EPD's review the feature does meet the definition of Riparian/Riverine as defined in Section 6.1.2 of the MSHCP thus avoidance measures are required. The proposed Parcel Map has been required to avoid and map the approximately 0.86 acre feature on all exhibits and is required to prepare an Environmental Constraint Sheet (ESC) to insure that this information is recorded and conveyed. In addition EPD has required Best Management Practices (BMP) be installed, which included silt fencing, prior to any grading activity and that a qualified biologist be on-site for all required grading. Recordation of the required ECS will also allow for enforcement and remediation of the feature if the area is disturbed in the future. Prior to issuance of a building permit the biologist must also prepare and submit a report for EPD review and approval detailing the results of the grading activity.

Based on EPD's review the feature enters the northern boundary of the site as an upland swale supporting a sandy bottom and minimal amount of riparian vegetation. The feature ultimately exits the site as sheet flow and conveys water over De Luz Road and into De Luz Creek. The feature is not directly connected to De Luz Creek to the south via culvert or direct connectivity but does convey sheet flow. This feature does qualify as Riparian/Riverine but lacks robust functions and values due to the lack of mature riparian vegetation and the ephemeral nature of the drainage. Avoidance and minimization of impacts to Riparian/Riverine features are based on the overall functions and values of the feature. Features that have superior functions and values, like De Luz or Sandia creek, will require additional avoidance and minimization measures like permanent fencing and/or conservation easements in order to insure that impacts do not occur. Based on the size of the feature, the functions and values, and size of the project EPD believes that the avoidance measures and existing conditions are adequate to insure the level protection of required for this Riparian/Riverine feature. If you need any further details or information please contact me directly. Thank you.

Further, pursuant to Public Resource Code Section 5097.98(b) remains shall be left in place and free from disturbance until a final decision as to the treatment and disposition has been made. If the Riverside County Coroner determines the remains to be Native American, the Native American Heritage Commission shall be contacted within a reasonable timeframe. Subsequently, the Native American Heritage Commission shall identify the "most likely descendant." The most likely descendant shall then make recommendations and engage in consultation concerning the treatment of the remains as provided in Public Resources Code Section 5097.98.

RECOMMND

If during ground disturbance activities, unique cultural resources are discovered that were not assessed by the archaeological report(s) and/or environmental assessment conducted prior to project approval, the following procedures shall be followed. Unique cultural resources are defined, for this condition, as being multiple artifacts in close association with each other, but may include fewer artifacts if the area of the find is determined to be of significance due to its sacred or cultural importance.

1. All ground disturbance activities within 100 feet of the discovered cultural resources shall be halted until a meeting is convened between the developer, the archaeologist, the Native American tribal representative and the Planning Director to discuss the significance of the find.

2. At the meeting, the significance of the discoveries shall be discussed and after consultation with the Native American tribal representative and the archaeologist, a

10.TRANS. 2 MAP - DRAINAGE 1 RECOMMND

The land divider shall protect downstream properties from damages caused by alteration of the drainage patterns, i.e., concentration or diversion of flow. Protection shall be provided by constructing adequate drainage facilities including enlarging existing facilities and/or by securing a drainage easement. All drainage easements shall be shown on the final map and noted as follows: "Drainage Easement - no building, obstructions, or encroachments by landfills are allowed". The protection shall be as approved by the Transportation Department.

10.TRANS. 3 MAP - DRAINAGE 2 RECOMMND

The land divider shall accept and properly dispose of all off-site drainage flowing onto or through the site. In the event the Transportation Department permits the use of streets for drainage purposes, the provisions of Article XI of Ordinance No. 460 will apply. The exhibit identifies all Oak trees that shall be preserved. The following tree preservation guidelines shall be incorporated in the project's approved grading, building, and landscaping plans:

1. No construction activities or placement of structures shall occur within the protected zone of any oak tree or oak woodland, except as provided herein. The protected zone is defined as a circle whose center is within the base of an oak tree, the radius of which is equal to an oak tree's height or ten (10) feet, whichever is greater. Where the outermost edge of an oak tree's drip line (the outermost edge of a tree's canopy) extends beyond this radius, that portion of the drip line shall also be included as part of that tree's protected zone. Protected zones do not apply to dead or dying oak trees, unless the tree's condition appears to be the result of human activity

that indicates an intent to kill the tree.

2. Landscaping, trenching, or irrigation systems shall not be installed within the existing protected zone of any oak tree or oak woodlands, unless recommended by a qualified biologist.

3. Land uses that would cause excessive soil compaction within the protected zone of any individual oak tree shall be avoided. No recreational trails are permitted within the drip line of any individual oak tree.

4. Manufactured cut slopes shall not begin their downward cut within the protected zone of any individual oak tree, except as provided in these guidelines.

5. Manufactured fill slopes shall not extend within the protected zone, except as provided in these guidelines.

6. On-site retaining walls, if required, shall be designed to protect the root system of any individual oak tree by preserving the natural grade within the protected zone.

7. Redirection of surface runoff which results in increased soil moisture for an extended period of time within the drip line area of any individual oak tree shall be avoided. If unavoidable, a drainage system shall be designed to maintain the previous amount of soil moisture.

8. Sedimentation and siltation shall be controlled to avoid filling around the base of oak trees.

9. Redirection of surface runoff which results in decreased soil moisture for an extended period of time within the drip line area shall be avoided. If unavoidable, an irrigation system shall be designed to maintain the previous amount of soil moisture.

10. A construction zone at the interface with a protected zone shall be clearly delineated on the site in order to avoid impacts from construction operations and also to prevent the storage or parking of equipment outside the construction zone.

Such oak trees shall be retained in place unless determined to pose a health or safety hazard in which case they shall be discarded at an approved on-site location identified by the consulting biologist for habitat enhancement.

12. On-site to on-site, or on-site to off-site relocation of oak trees will not constitute mitigation and is considered the same as removal for the purposes of these guidelines.

13. Replacement of oak trees with plantings of saplings or acorns is not required by these guidelines; however, replacement plantings may be used in addition to these guidelines when they are required by another agency or when it is determined to be biologically sound and appropriate to do so.

Dear Mr. Bufalino:

Please be advised that the above-referenced property is located within the boundaries of Rancho California Water District (RCWD), and fronts an existing 8-inch diameter water pipeline within Paseo De Flores. Water service, therefore, would be available upon the extension of water pipeline facilities within Paseo De Flores for fire protection and water service to individual lots, and the completion of financial arrangements between RCWD and the property owner. The owner will need to contact RCWD for fees and requirements.

In addition, water availability is contingent upon the property owner signing an Agency Agreement that assigns water management rights, if any, to RCWD.

Sanitary sewer service to the subject project is not available. If you should have any questions or need additional information, please contact an Engineering Services Representative at this office at (951) 296-6900.

Sincerely,
